

Open access

Open access (OA) is a set of principles and a range of practices through which [research](#) outputs are distributed online, free of access charges or other barriers. With open access strictly defined (according to the 2001 definition), or [libre](#) open access, barriers to copying or reuse are also reduced or removed by applying an [open license](#) for copyright.

The main focus of the open access movement is "[peer reviewed](#) research literature". Historically, this has centered mainly on print-based [academic journals](#). Whereas non-open access journals cover publishing costs through [access tolls](#) such as subscriptions, site licenses or [pay-per-view](#) charges, open-access journals are characterised by funding models which do not require the reader to pay to read the journal's contents, relying instead on [author fees](#) or on public funding, subsidies and sponsorships. Open access can be applied to all forms of published research output, including [peer-reviewed](#) and non peer-reviewed [academic journal](#) articles, [conference papers](#), [theses](#),^[3] [book chapters](#),^[1] [monographs](#),^[4] [research reports](#) and images
